

► Why you should use the modular safety relay myPNOZ

Sounds familiar?

- Had enough of wading through product catalogues and comparing products?
- Do you want to safeguard your complex system comprising several independent zones?
- Would you like to simulate your solution before ordering, to be sure you choose the right product?
- Do you need semiconductor and relay outputs for your safety relay?
- Do you find programming a safety control system too tedious?
- Do you want a flexible solution that can still be changed after commissioning?
- Do you want to save time and money by commissioning your safety relay quickly and easily?

Then we have the optimum solution for you!

Your safety – individual, tailor-made, easy solution.

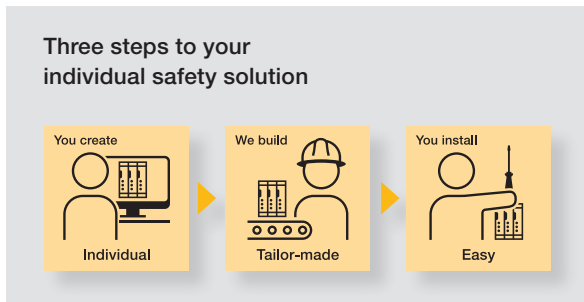

The modular safety relays myPNOZ enable tailor-made safety solutions: easy, flexible, cost-effective. The innovative online tool myPNOZ Creator performs the main role. It makes configuring your individual safety solution incredibly easy.

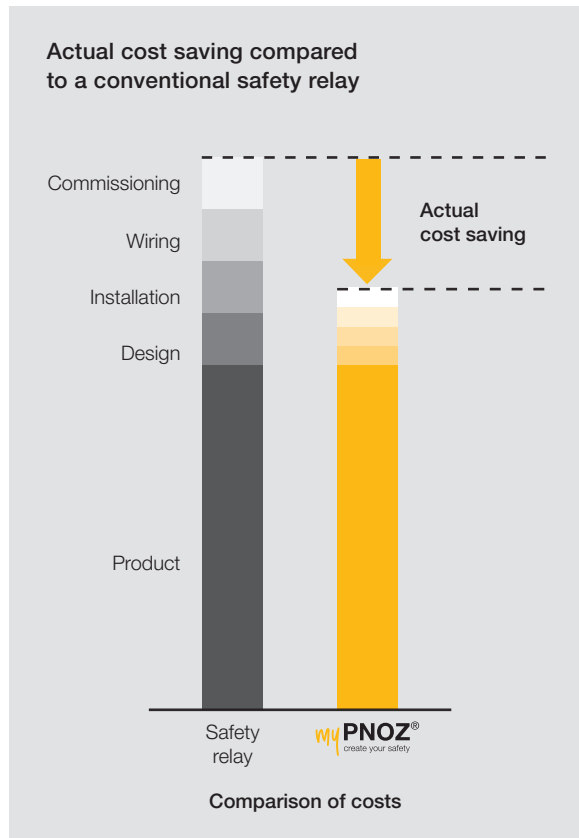

► Why you should invest now in myPNOZ!

With myPNOZ you can...

- create your safety solution intuitively and without any software knowledge in the online tool myPNOZ Creator.
 - easily order or reorder a specific safety configuration thanks to the type code.
 - monitor up to eight independent safety zones.
 - simulate and test configured safety functions online before ordering.
 - monitor safety functions with both non-wearing semiconductor and relay outputs.
- realise up to 16 safety functions without the complexity of a safety control system.
 - adapt your configuration yourself, including after commissioning.
 - start using it straight away, because it is supplied ready to install.
 - save valuable time during wiring.
